Brief about your solution and problem statement addressing

Problem Statement

College students often struggle to find affordable hangout places that fit their budget. At the same time, local cafes, restaurants, and entertainment spots lack a simple platform to showcase budget-friendly offers to students.

Solution:

Find Your Space is a simple web-based MVP that helps students discover nearby hangout spots based on their budget and preferred category.

Local shopkeepers can submit their offers through a Google Form, which automatically updates a Google Sheet used as the project database.

Students enter their budget and hangout type, and the system instantly shows matching places.

Opportunities

- How different is it from any of the other existing ideas?

"Find Your Space" differs by targeting the "Hidden Student Economy" that big apps like Google Maps or Zomato ignore. Unlike those commission-heavy platforms, our solution offers a zero-cost entry for small vendors via Google Forms. We prioritize "Wallet-First" searching, allowing students to filter by exact budget rather than just location. By leveraging a serverless Google Sheets ecosystem, we've built a community-driven, scalable model that digitizes local haunts with zero maintenance costs.

- How will it be able to solve the problem?

"Find Your Space" solves the financial stress of student life by providing a dedicated platform for hyper-local, budget-friendly hangouts. It eliminates "price anxiety" by allowing users to filter searches by their exact wallet capacity, uncovering hidden gems that major apps ignore. By using Google Forms for crowdsourcing, it digitizes small vendors for free, giving them visibility without high commissions. The Google Sheets integration ensures the data stays live and community-driven with zero maintenance costs. This creates a sustainable, zero-cost bridge between budget-conscious students and local affordable businesses.

List of features offered by the solution

- Wallet-Centric Filtering:** Users can set a precise budget range (e.g., ₹50 to ₹200). The system dynamically filters the database to show only those spots, preventing any financial surprises.
- Live Crowdsourced Updates:** Integrated with **Google Forms**, the platform allows students to instantly "Add a Spot." This keeps the data fresh and includes local vendors that are not found on mainstream apps.
- Real-Time Cloud Database:** By using **Google Sheets as a backend**, the application reflects new entries instantly without any manual code changes or server restarts.
- Zero-Cost Vendor Onboarding:** Small-scale vendors (like tea stalls or street food joints) can get "digitized" for free. They don't need technical skills or high commission payments to reach their target student audience.
- Hyper-Local Discovery:** Unlike GPS apps that prioritize high-paying businesses, this solution highlights the "Hidden Gems" of a specific college campus—like cheap study spots or hidden rooftop hangouts.

Google Technologies used in the solution

Google Sheets API: Used as a lightweight, real-time NoSQL database to store and fetch hangout data.

Google Forms: Integrated as a front-end "data crowdsourcing" tool for users and vendors to add new locations seamlessly.

Google Cloud (Local Simulation): Used for managing the environment variables and potential deployment scaling.

Google Chrome DevTools: Utilized for debugging the Flask frontend and optimizing the UI for student mobile users.

Google Drive: Used for hosting and managing project assets and documentation.

Find Your Space

Welcome! This form is for shopkeepers and local hangout owners to submit budget-friendly deals for students. Please fill in the details of your café, restaurant, movie place, or gaming spot so students can discover affordable options. Make sure all information is accurate. Once submitted, your data will appear on our Budget Hangout Finder app, helping students find hangouts that match their budget and preferences.
